

Appl. No. 10/721,120
Art Unit: 3617
Docket No: 0036-P033221US00

Attachment A-2
Abstract

Please substitute the following Abstract:

ABSTRACT

For fastening an auxiliary wheel to the wheel of a vehicle, bolts are fixed to the auxiliary wheel, which bolts are aligned substantially parallel to the wheel axle of the auxiliary wheel. Each of the bolts has a head which can be inserted into slot-shaped recesses provided on the wheel of the vehicle and can be pushed into the slot-shaped recesses. The head of the bolts is hereby held in the slot-shaped recesses. The auxiliary wheel is locked in this position through locking apparatus. A simple mounting and dismounting of an auxiliary wheel to the wheel of a vehicle is thereby obtained.
